## objectives

- Provide a simplistic method to register courses.
- Substitute the current registered courses.
- Secure a great opportunity for doctors to stop worrying about making the course offering compatible and conflict-free

## structure

The program was divided into three major parts and they're :

1. The Crn creation phase where the program generates multiple non overlapping Crns that are compatible with each other in the scope of the same year and doesn't create a conflict with other courses
2. The course registration phase where the student enrolls in the Crns specified depending on they're time and duration during the day.
3. The schedule display phase where the program displays the course and its time during the days of the week

## Future work

Implementing both of the function that we already made:

1. An admin account that can edit the time and the duration of the program created Crns and create new ones.
2. The login and signup method that makes sure to create accounts for the new enrolled students for them to access our course offering and registration system
